Specification for Stainless Steel Electrodes for Shielded Metal Arc Welding
Abstract

Composition and other requirements are specified for more than forty classifications of covered stainless steel welding electrodes. The requirements include general requirements, testing, and packaging. Annex A provides application guidelines and other useful information about the electrodes.

This specification makes use of both U.S. Customary Units and the International System of Units [SI]. Since these are not equivalent, each system must be used independently of the other.
Statement on the Use of American Welding Society Standards

All standards (codes, specifications, recommended practices, methods, classifications, and guides) of the American Welding Society (AWS) are voluntary consensus standards that have been developed in accordance with the rules of the American National Standards Institute (ANSI). When AWS American National Standards are either incorporated in, or made part of, documents that are included in federal or state laws and regulations, or the regulations of other governmental bodies, their provisions carry the full legal authority of the statute. In such cases, any changes in those AWS standards must be approved by the governmental body having statutory jurisdiction before they can become a part of those laws and regulations. In all cases, these standards carry the full legal authority of the contract or other document that invokes the AWS standards. Where this contractual relationship exists, changes in or deviations from requirements of an AWS standard must be by agreement between the contracting parties.

AWS American National Standards are developed through a consensus standards development process that brings together volunteers representing varied viewpoints and interests to achieve consensus. While AWS administers the process and establishes rules to promote fairness in the development of consensus, it does not independently test, evaluate, or verify the accuracy of any information or the soundness of any judgments contained in its standards.

AWS disclaims liability for any injury to persons or to property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance on this standard. AWS also makes no guarantee or warranty as to the accuracy or completeness of any information published herein.

In issuing and making this standard available, AWS is neither undertaking to render professional or other services for or on behalf of any person or entity, nor is AWS undertaking to perform any duty owed by any person or entity to someone else. Anyone using these documents should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. It is assumed that the use of this standard and its provisions is entrusted to appropriately qualified and competent personnel.

This standard may be revised, corrected through publication of amendments or errata, or supplemented by publication of addenda. Information on the latest editions of AWS standards including amendments, errata, and addenda is posted on the AWS web page (www.aws.org). Users should ensure that they have the latest edition, amendments, errata, and addenda.

Publication of this standard does not authorize infringement of any patent or trade name. Users of this standard accept any and all liabilities for infringement of any patent or trade name items. AWS disclaims liability for the infringement of any patent or product trade name resulting from the use of this standard.

AWS does not monitor, police, or enforce compliance with this standard, nor does it have the power to do so.

Official interpretations of any of the technical requirements of this standard may only be obtained by sending a request, in writing, to the appropriate technical committee. Such requests should be addressed to the American Welding Society, Attention: Managing Director, Technical Services Division, 8669 Doral Blvd., Suite 130, Doral, FL 33166 (see Annex B). With regard to technical inquiries made concerning AWS standards, oral opinions on AWS standards may be rendered. These opinions are offered solely as a convenience to users of this standard, and they do not constitute professional advice. Such opinions represent only the personal opinions of the particular individuals giving them. These individuals do not speak on behalf of AWS, nor do these oral opinions constitute official or unofficial opinions or interpretations of AWS. In addition, oral opinions are informal and should not be used as a substitute for an official interpretation.

This standard is subject to revision at any time by the AWS A5 Committee on Filler Metals and Allied Materials. It must be reviewed every five years, and if not revised, it must be either reaffirmed or withdrawn. Comments (recommendations, additions, or deletions) and any pertinent data that may be of use in improving this standard are required and should be addressed to AWS Headquarters. Such comments will receive careful consideration by the AWS A5 Committee on Filler Metals and Allied Materials and the author of the comments will be informed of the Committee’s response to the comments. Guests are invited to attend all meetings of the AWS A5 Committee on Filler Metals and Allied Materials to express their comments verbally. Procedures for appeal of an adverse decision concerning all such comments are provided in the Rules of Operation of the Technical Activities Committee. A copy of these Rules can be obtained from the American Welding Society, 8669 Doral Blvd., Suite 130, Doral, FL 33166.

Foreword

This foreword is not part of AWS A5.4/A5.4M:2012, Specification for Stainless Steel Electrodes for Shielded Metal Arc Welding, but is included for informational purposes only.

This document is the second of the A5.4 specifications which makes use of both U.S. Customary Units and the International System of Units (SI). The measurements are not exact equivalents; therefore each system must be used independently of the other, without combining values in any way. In selecting rational metric units, the Metric Practice Guide for the Welding Industry (AWS A1.1) and International Standard ISO 544, Welding consumables—Technical delivery conditions for welding filler materials—Type of product, dimensions, tolerances, and marking are used where suitable. Tables and figures make use of both U.S. Customary and SI Units, which with the application of the specified tolerances provides for interchangeability of products in both the U.S. Customary and SI Units.

The Major Changes Incorporated in This Revision Include Updating Clause 6 (Rounding-off Procedure), Adding “Bi” Reporting Requirement, and New Filler Metal Classification E2307-XX. These changes are shown in italic font.

This AWS specification has evolved since the mid 1940s to its present form. The specification for covered stainless steel electrodes, issued in 1946, was prepared by a joint committee of the American Society for Testing and Materials and the American Welding Society. This cooperative effort continued for about 20 years and produced three revisions. The first revision, produced exclusively by the AWS Committee on Filler Metals, was published in 1969.

The current revision represents the tenth revision of the original 1946 document as shown below:

- ASTM A298-46T  Tentative Specification for Corrosion-Resisting Chromium and
- AWS A5.4-46T  Chromium-Nickel Steel Welding Electrodes
- ASTM A298-48T  Tentative Specifications for Corrosion-Resisting Chromium and
- AWS A5.4-48T  Chromium-Nickel Steel Welding Electrodes
- ASTM A298-55T  Tentative Specifications for Corrosion-Resisting Chromium and
- AWS A5.4-55T  Chromium-Nickel Steel Covered Welding Electrodes
- AWS A5.4-62T  Tentative Specification for Corrosion-Resisting Chromium and
- ASTM A298-62T  Chromium-Nickel Steel Covered Welding Electrodes
- AWS A5.4-69  Specification for Corrosion-Resisting Chromium and Chromium-Nickel Steel Covered Welding Electrodes
- AWS A5.4-Add. 1-75  1975 Addenda to Specification for Corrosion-Resisting Chromium and Chromium-Nickel Steel Covered Welding Electrodes
- AWS A5.4-78  Specification for Corrosion-Resisting Chromium and Chromium-Nickel Steel Covered Welding Electrodes
- ANSI/AWS A5.4-81  Specification for Covered Corrosion-Resisting Chromium and Chromium-Nickel Steel Welding Electrodes
- ANSI/AWS A5.4-92  Specification for Stainless Steel Electrodes for Shielded Metal Arc Welding
- AWS A5.4/A5.4M:2006  Specification for Stainless Steel Electrodes for Shielded Metal Arc Welding

In this reaffirmation, the following editorial changes were made: the American Welding Society’s address was updated; Table A.1 in the List of Tables was modified to match the actual table; The title of Clause 6 was revised to read “Rounding Procedure”; In Figure 2, the “45° ± 5°” angle was revised to read “22.5° ± 2.5°” on both sides; The text “from Cb to Nb” was added to Table 6 note a.

In this reaffirmation, the following errata was incorporated: The “H” symbol in Figure A.1 was changed to the “×” symbol.

Comments and suggestions for the improvement of this standard are welcome. They should be sent to the Secretary, A5 Committee on Filler Metals and Allied Materials, American Welding Society, 8669 Doral Blvd., Suite 130, Doral, FL 33166.

Specification for Stainless Steel Electrodes for Shielded Metal Arc Welding

1. Scope

1.1 This specification prescribes requirements for the classification of covered stainless steel electrodes for shielded metal arc welding.¹,²

The chromium content of weld metal deposited by these electrodes is not less than 10.5 percent and the iron content exceeds that of any other element. For purposes of classification, the iron content shall be derived as the balance element when all other elements are considered to be at their minimum specified values.

NOTE: No attempt has been made to classify all grades of filler metals within the limits of the above scope; only the more commonly used grades have been included.

1.2 Safety and health issues and concerns are beyond the scope of this standard and, therefore, are not fully addressed herein. Some safety and health information can be found in Annex Sections A5 and A11. Safety and health information is available from other sources, including, but not limited to ANSI Z49.1, Safety in Welding, Cutting and Allied Processes, and applicable state and federal regulations.

1.3 This specification makes use of both U.S. Customary Units and the International System of Units [SI]. The measurements are not exact equivalents; therefore, each system must be used independently of the other without combining in any way when referring to material properties. The specification with the designation A5.4 uses U.S. Customary Units. The specification A5.4M uses SI Units. The latter are shown in brackets [ ] or in appropriate columns in tables and figures. Standard dimensions based on either system may be used for sizing of filler metal or packaging or both under A5.4 or A5.4M specifications.

2. Normative References

2.1 The following AWS standards³ are referenced in the mandatory section of this document.

1. AWS A5.01M/A5.01 (ISO 14344 MOD). Procurement Guidelines for Consumables – Welding and Allied Processes – Flux and Gas Shielded Electrical Welding Processes

2. AWS A5.5, Specification for Low-Alloy Steel Electrodes for Shielded Metal Arc Welding

3. AWS B4.0, Standard Methods for Mechanical Testing of Welds

4. AWS B4.0M, Standard Methods for Mechanical Testing of Welds

2.2 The following ANSI standard is referenced in the mandatory section of this document:

1. ANSI Z49.1⁴, Safety in Welding, Cutting and Allied Processes

¹ Due to possible differences in composition, core wire from covered electrodes should not be used as bare filler wire.
² Classifications E502, E505, and E7Cr are no longer specified by this document. They are specified in AWS A5.5/A5.5M:2006, designated as follows: E502 as E801X-B6 and E801X-B6L, E505 as E801X-B8 and E801X-B8L, and E7Cr as E801X-B7 and E801X-B7L.
