Safety in Welding, Cutting, and Allied Processes

Revises ANSI Z49.1:2012

Prepared by the
Accredited Standards Committee Z49,
Safety in Welding and Cutting

Secretariat
American Welding Society

Abstract

This standard covers all aspects of safety and health in the welding environment, emphasizing oxygen gas and arc welding processes with some coverage given to resistance and high energy beam welding, brazing and soldering. It contains information on protection of personnel and the general area, ventilation, fire prevention and protection, and confined spaces. A significant section is devoted to precautionary information, showing examples, and an extensive bibliography is included.

American National Standard

Approval of an American National Standard requires review by ANSI that the requirements for due process, consensus, and other criteria for approval have been met by the standards developer.

Consensus is established when, in the judgment of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken periodically to reaffirm, revise, or withdraw this standard. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Personnel

(The following is the roster of the Committee at the time of final committee action on the document.)

American National Standard Committee Z49

A. F. Manz, Chair
D. A. Werba, Vice Chair
S. P. Hedrick, Secretary

AMERICAN FOUNDRY SOCIETY

J. Garcshe

AMERICAN COLLEGE OF OCCUPATIONAL AND ENVIRONMENTAL MEDICINE

L. Lee

AMERICAN PUBLIC HEALTH ASSOCIATION

P. F. Dooley

AMERICAN SOCIETY OF SAFETY PROFESSIONALS

T. J. Martin

AMERICAN WELDING SOCIETY

D. A. Werba
S. P. Hedrick (Alternate)

CANADIAN STANDARDS ASSOCIATION

J. J. Palach

CANADIAN WELDING BUREAU

C. Cadarin

COMPRESSED GAS ASSOCIATION

A. F. Manz

INTERNATIONAL ASSOCIATION OF BRIDGE, STRUCTURAL, ORNAMENTAL AND REINFORCING IRON WORKERS

E. Abbott

INTERNATIONAL THERMAL SPRAY ASSOCIATION

D. Hayden

INTERNATIONAL SAFETY EQUIPMENT ASSOCIATION, INCORPORATED

C. Fargo

MECHANICAL CONTRACTORS ASSOCIATION OF AMERICA, INCORPORATED

P. Chaney
W. Sperko (Alternate)

NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION, INCORPORATED

S. Farah
M. Madsen (Alternate)

NATIONAL FIRE PROTECTION ASSOCIATION

L. E. Moreno (nonvoting)

SHEET METAL WORKERS INTERNATIONAL

M. Van Avery

U.S. DEPARTMENT OF THE AIR FORCE

R. Baker

R. Foster (Alternate)

U.S. DEPARTMENT OF THE ARMY

L. B. Keaton

U.S. DEPARTMENT OF THE NAVY

E. Berg

U.S. PUBLIC HEALTH SERVICE (NIOSH)

J. M. Antonini

Foreword

This foreword is not part of this standard but is included for informational purposes only.

The huge demands for production placed on the United States by World War II brought a tremendous expansion to the use of welding. In mid 1943, it was recognized that some type of code or standard was needed relating to safe practices for performing welding. Under the auspices of the American Standards Association, the standard was drafted and published in 1944. It was entitled American War Standard Z49.1, *Safety in Electric and Gas Welding, and Cutting Operations*.

Following the war, the standard was first revised in 1950. Subsequent revisions occurred in 1958, 1967, 1973, and 1983. Each updated the standard in accordance with changing technology and welding practices. The revisions up to and including 1973 were largely evolutionary and closely preserved the format of the original war standard.

In 1983, a major rewrite was undertaken to take proper account of the vast changes in welding which had occurred in the 40 years of the standard's existence and to clarify the somewhat patchwork presentation that had built up during the evolutionary revisions. The scope was redefined to address in greater detail the safety rules to be practiced by the welder and enforced by welding supervision and management. Provisions which had appeared in earlier editions, but which dealt more with building construction and piping installation over which the welder had little control, were deleted. The 1988, 1994, 1999, 2005, 2012, and 2021 revisions follow this same philosophy. Revisions are identified by a vertical line in the margin next to the text.

During the period of its publication, the American Standards Association has become the American National Standards Institute and War Standard ASA Z49.1-1944 has now become ANSI Z49.1:2021.

Comments and suggestions for the improvement of this standard are welcome. They should be sent to the Secretary, Z49 Committee, American Welding Society, 8669 NW 36 St, # 130, Miami, FL 33166.

Safety in Welding, Cutting, and Allied Processes

(American National Standard Z49.1:2021 uses a two-column format to provide both specific requirements and supporting information. The left column is designated as “Standard Requirements” and the right column is designated as “Explanatory Information.” The paragraph number of the Explanatory Information is preceded by the letter “E.”)

Standard Requirements

Explanatory Requirements

Part I *General Aspects*

1. Purpose and Scope

1.1 Purpose. This standard is for the protection of persons from injury and illness and the protection of property (including equipment) from damage by fire and explosions arising from welding, cutting, and allied processes.

1.2 Scope and Applicability. This standard shall be for the guidance of educators, operators, managers, and supervisors in the safe setup and use of welding and cutting equipment, and the safe performance of welding and cutting operations.

E1.1 Beginning with the revision of 1983, the scope of ANSI Standard Z49.1 has been refocused towards those safe practices for performing welding, cutting, and allied processes, which are generally within the implementation control of the welder or the weld shop management. It is written in a manner suitable for issuance to the welder and shop management to give practical information to help them perform these functions safely. It also contains information useful to educators, industrial hygienists, engineers, and similar parties also responsible for safety and health in welding. With this refocused scope, some provisions which appeared in prior editions have been deleted. Those were provisions which dealt more in matter of building design and construction, facility pipelines, and electrical installations. Those provisions, of course, are still important and necessary and must be followed. They are not provisions usually under the immediate control of welding and cutting operations.

E1.2 Specific provisions are included for oxyfuel gas and arc welding and cutting, resistance welding, electron beam welding, laser beam cutting and welding, and brazing and soldering.

However, the requirements of this standard are generally applicable to the other welding processes such as submerged arc welding and allied processes shown in the American Welding Society Master Chart of Welding and Allied Processes, included in Annex D.
