Standard Methods for Mechanical Testing of Welds
Abstract

Mechanical test methods that are applicable to welds and welded joints are described. For each testing method, information is provided concerning applicable American National Standards Institute (ANSI), American Society for Testing and Materials (ASTM), and American Petroleum Institute (API) documents; the required testing apparatus, specimen preparation, procedure to be followed, and report requirements are also described.
Statement on the Use of American Welding Society Standards

All standards (codes, specifications, recommended practices, methods, classifications, and guides) of the American Welding Society (AWS) are voluntary consensus standards that have been developed in accordance with the rules of the American National Standards Institute (ANSI). When AWS American National Standards are either incorporated in, or made part of, documents that are included in federal or state laws and regulations, or the regulations of other governmental bodies, their provisions carry the full legal authority of the statute. In such cases, any changes in those AWS standards must be approved by the governmental body having statutory jurisdiction before they can become a part of those laws and regulations. In all cases, these standards carry the full legal authority of the contract or other document that invokes the AWS standards. Where this contractual relationship exists, changes in or deviations from requirements of an AWS standard must be by agreement between the contracting parties.

AWS American National Standards are developed through a consensus standards development process that brings together volunteers representing varied viewpoints and interests to achieve consensus. While the AWS administers the process and establishes rules to promote fairness in the development of consensus, it does not independently test, evaluate, or verify the accuracy of any information or the soundness of any judgments contained in its standards.

AWS disclaims liability for any injury to persons or to property, or other damages of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance on this standard. AWS also makes no guarantee or warranty as to the accuracy or completeness of any information published herein.

In issuing and making this standard available, AWS is neither undertaking to render professional or other services for or on behalf of any person or entity, nor is AWS undertaking to perform any duty owed by any person or entity to someone else. Anyone using these documents should rely on his or her own independent judgment or, as appropriate, seek the advice of a competent professional in determining the exercise of reasonable care in any given circumstances. It is assumed that the use of this standard and its provisions are entrusted to appropriately qualified and competent personnel.

This standard may be superseded by the issuance of new editions. Users should ensure that they have the latest edition.

Publication of this standard does not authorize infringement of any patent or trade name. Users of this standard accept any and all liabilities for infringement of any patent or trade name items. AWS disclaims liability for the infringement of any patent or product trade name resulting from the use of this standard.

Finally, the AWS does not monitor, police, or enforce compliance with this standard, nor does it have the power to do so.

On occasion, text, tables, or figures are printed incorrectly, constituting errata. Such errata, when discovered, are posted on the AWS web page (www.aws.org).

Official interpretations of any of the technical requirements of this standard may only be obtained by sending a request, in writing, to the appropriate technical committee. Such requests should be addressed to the American Welding Society, Attention: Managing Director, Technical Services Division, 550 N.W. LeJeune Road, Miami, FL 33126 (see Annex C). With regard to technical inquiries made concerning AWS standards, oral opinions on AWS standards may be rendered. These opinions are offered solely as a convenience to users of this standard, and they do not constitute professional advice. Such opinions represent only the personal opinions of the particular individuals giving them. These individuals do not speak on behalf of AWS, nor do these oral opinions constitute official or unofficial opinions or interpretations of AWS. In addition, oral opinions are informal and should not be used as a substitute for an official interpretation.

This standard is subject to revision at any time by the AWS B4 Committee on Mechanical Testing of Welds. It must be reviewed every five years, and if not revised, it must be either reaffirmed or withdrawn. Comments (recommendations, additions, or deletions) and any pertinent data that may be of use in improving this standard are required and should be addressed to AWS Headquarters. Such comments will receive careful consideration by the AWS B4 Committee on Mechanical Testing of Welds and the author of the comments will be informed of the Committee’s response to the comments. Guests are invited to attend all meetings of the AWS B4 Committee on Mechanical Testing of Welds to express their comments verbally. Procedures for appeal of an adverse decision concerning all such comments are provided in the Rules of Operation of the Technical Activities Committee. A copy of these Rules can be obtained from the American Welding Society, 550 N.W. LeJeune Road, Miami, FL 33126.

Foreword

This foreword is not part of AWS B4.0M:2000 (R2010), Standard Methods for Mechanical Testing of Welds, but is included for informational purposes only.

This standard covers the common tests for the mechanical testing of welds. They are defined and illustrated in five parts related to testing of groove welds, fillet welds, and stud welds. The tests include: bend tests, tension tests, fracture toughness tests, soundness tests, shear tests, nick-break test, hardness tests, stud weld tests, and selected weldability tests.

This document extensively uses American Society for Testing and Materials (ASTM) Standard Methods and specifies how to use these methods when testing weldments. It takes into consideration the variations in properties that can occur between different regions (base metal, heat-affected zone, and weld metal) of a weldment.

Methods of hardness testing and mechanical property tests for base metals are covered by ASTM standards or the individual material specification. The joint tests for brazements are covered in AWS C3.2, Standard Methods for Evaluating the Strength of Brazed Joints in Shear.

This Foreword applies to all five parts. Additional information on the mechanical testing of welded joints may be obtained from the AWS Welding Handbook, Volume 1.

The values stated in SI Units and used throughout this document are to be regarded as standard. Recommendation for style and usage of SI Units may be found in AWS A1.1, Metric Practice Guide for the Welding Industry.

An expanded section on weldability testing is included in this edition of B4.0M. Selected weldability test methods are described.

Note: This standard may involve hazardous materials, operations, and equipment. The standard does not purport to address all of the safety problems associated with its use. It is the responsibility of the user to establish appropriate safety and health practices. The user should determine the applicability of any regulatory limitations prior to use.

Comments and suggestions for the improvement of this standard are welcome. They should be sent to the Secretary, AWS B4 Committee on Mechanical Testing of Welds, American Welding Society, 550 N.W. LeJeune Road, Miami, FL 33126.

## Part A—Testing of Groove Welds

A1. Bend Tests

1. Scope                                                                 | 1       |
2. Applicable Documents                                                  | 1       |
3. Summary of Method                                                     | 2       |
4. Significance                                                          | 2       |
5. Definitions and Symbols                                               | 2       |
6. Apparatus                                                            | 2       |
7. Specimens                                                             | 2       |
8. Procedure                                                             | 3       |
9. Report                                                                | 3       |
10. Commentary                                                           | 4       |

A2. Tension Tests

1. Scope                                                                 | 15      |
2. Applicable Documents                                                  | 15      |
3. Summary of Method                                                     | 15      |
4. Significance                                                          | 15      |
5. Definitions and Symbols                                               | 16      |
6. Apparatus                                                            | 16      |
7. Specimens                                                             | 16      |
8. Procedure                                                             | 17      |
9. Report                                                                | 17      |

A3. Fracture Toughness Tests

1. Scope                                                                 | 24      |
2. Applicable Documents                                                  | 24      |
3. Summary of Method                                                     | 24      |
4. Significance                                                          | 25      |
5. Definitions and Symbols                                               | 25      |
6. Apparatus                                                            | 25      |
7. Specimens                                                             | 25      |
8. Procedure                                                             | 25      |
9. Report                                                                | 25      |

## Part B—Testing of Fillet Welds

B1. Longitudinal Guided-Bend Test

1. Scope                                                                 | 33      |
2. Applicable Documents                                                  | 33      |
3. Summary of Method                                                     | 33      |
4. Significance                                                          | 33      |

A1. Bend Tests

1. Scope

1.1 This section covers the bend testing of groove welds in butt joints and the bend testing of surfacing welds. The standard gives the requirements for bend test specimen preparation, test parameters and testing procedures but does not specify the bend radius requirements or acceptance criteria.

1.2 The base materials may be homogenous, clad or otherwise surfaced, except for hardfacing.

1.3 This standard is applicable to the following, where specified:
   (1) Qualification of materials, welding personnel and welding procedures
   (2) Information, specifications of acceptance, manufacturing quality control
   (3) Research and development

1.4 When this standard is used, the following information shall be furnished:
   (1) The specific location and orientation of the specimens
   (2) The specific types of tests, for example, face bend, side bend or root bend and number of specimens required
   (3) The type of data required and observations to be made
   (4) Bend radius or percent (%) elongation
   (5) Postweld thermal or mechanical processing treatments

   Note: This standard may involve hazardous materials, operations, and equipment. The standard does not purport to address all of the safety problems associated with its use. It is the responsibility of the user to establish appropriate safety and health practices. The user should determine the applicability of any regulatory limitations prior to use.

2. Applicable Documents

Reference should be made to the latest edition of the following documents:

- ANSI/ASME B46.1 Surface Texture
- ASTM E 190 Standard Method for Guided Bend Test for Ductility of Welds
- ASTM A 370 Standard Test Methods and Definitions for Mechanical Testing of Steel Products
- AWS A2.4 Standard Symbols for Welding, Brazing, and Nondestructive Examination
- AWS A3.0 Standard Welding Terms and Definitions
